

SQUARE SCRUB

EBG-20

SURFACE PREPARATION MACHINE

One of the *most innovative & exciting* new products to be introduced into the floor care industry *in years!*

- Pulverizes floor finish
- Prepares flooring to be re-finished in half the time
- Requires less effort than traditional rotary machines
- Prepares up to 1600 sq ft per hour
- No harsh chemicals
- Quiet operation (Less than 62db)

AFTER

BEFORE

Square is better

Round versus Square

No extra hand scrubbing required with the Square Scrub. It does all the work!

Green product

Chemical Free!

Green, chemical free process is safer for the planet, and no more slippery floors!

Saves floors

Perfect in doorways

Clean edges, even in doorways! No stripper run off. No ruined floors under doors!

The EBG -20 machine has the ability to dry scrub several layers of finish off the floor without water or chemical involved. This green process should reduce slip and fall accidents for both workers and occupants. Injuries are expensive in many ways. From direct cost of the medical expenses and the indirect cost of not having important personnel available for normal work tasks can be daunting on your organization's overall productivity.

The Square Scrub uses the 3M SPP floor preparation pad which allows this product to be considered "planet friendly" and this new method of floor preparation can eliminate up to 95% of your chemical stripping needs. Since most of the Square Scrub's process is completed dry and can be cleaned up with a dry vacuum, little water is used, therefore following the "green" stamp of approval. Using less water not only means helping this planet, but also making less trips to empty wet vacs and dirty mop water. Two light, damp rinses are all that are needed with this process. The Square Scrub process is also chemical free. Gone are the days filled with complaints of odor and potential harsh respiratory issues that come with conventional chemical strippers.

At only 62 DB, operators of this machine will be able to work throughout the day and not bother any surrounding occupants of the structure being worked on. This will allow extra time for more coats of finish to be laid if needed.

The Square Scrub EBG-20 is very easy to use and quick to learn. A new operator of the machine can become proficient within minutes instead of the hours a conventional rotary floor machine would take to become acquainted with. This allows for funds saved on training to be used elsewhere.

If you're wondering where we came up with a name like Square Scrub, just take a look at its simple yet very efficient design. This design allows an operator to get very close to the edges and corners of flooring without the unpleasant physical hand methods of doddle bugging and blade scraping of edges. This also reduces the strain on the folks who do this type of work and makes the job much more pleasant.

The Square Scrub can prepare up to 1600 square feet of flooring an hour in normal conditions with an experienced operator. Our customers routinely tell us that the EBG-20 saves them about 50 percent of the time compared to the conventional stripping process.

Call Square Scrub Today and see why people are switching to our product!

We offer a One-Year Limited Warranty, and a Two-Year Limited Motor Warranty.

Specifications subject to change without notice. Patents Pending.

SQUARE SCRUB

EBG-20

SURFACE PREPARATION MACHINE

Pad Size

14" x 20"

Motor

1.5HP, 1725RPM, 9.0 Amp draw under normal operating conditions, overload protection

Frame

Powder coated 10 gauge steel, heavy duty frame construction

Wheels

5" x 2" inch non-marking transport wheels with heavy duty 3/4" solid steel axel and roller bearings for easy rolling

Handle

Powder coated 12 guage steel with padded handgrips for operator comfort featuring a unique slide pinch handle locking mechanism

Weight

125LBS with removable weights

Cord

50' safety yellow cord with hospital grade lighted plug

Noise Level

Less than 62dBA
